A horizontal bar chart illustrating the number of taxi pickups per hour in Manhattan. The vertical axis represents the 'Pickup Hour' from 0 to 23. The horizontal axis represents the count of pickups, with major grid lines at 0, 5, 10, 15, and 20. The bars are shaded in a gradient from light gray to dark gray. The data shows a significant increase in pickups starting around 10 PM, peaking at approximately 22 pickups around 17 PM, and then gradually declining towards 23 PM.

Total					146478		\$1,553,672.8		103728.0

Uber Trip Analysis Recommendations

- 1. Double Down on UberX** UberX dominates with **38,744 bookings** — nearly double any other vehicle type. Ensure driver supply for UberX is always prioritized, especially at peak hours.
- 2. Night Trips Are Your Bread & Butter** **65% of trips are night rides.** Make sure surge pricing and driver availability are optimized for evenings — that's where the volume lives.
- 3. Fix the Friday Problem** Friday has the lowest bookings (**9.3K**) while Sunday leads at **19.2K**. Run **Friday-specific promotions** to smooth out demand across the week.
- 4. Push Cashless Payments** Cash still accounts for **32% of payments** — that's a risk (fraud, disputes, slower transactions). Incentivize Uber Pay with small discounts to shift behaviour.
- 5. Penn Station is Your Golden Location** Penn Station/Madison Sq West is the **#1 pickup spot**. Station dedicated driver pools there during morning and evening rush hours to reduce wait times and capture more rides.

Bottom Line:

The business is healthy \$1.6M in a single month is solid. The biggest opportunity is **reducing Friday drop-off and converting cash users to digital payments.**
